Career profile

Hello! I am a 2025 advanced computer science R&D and science double degree graduate from the Australian National University, and am currently working as a graduate vulnerability researcher at InfoSect CBR.

Skills

Cybersecurity skills: Linux ELF exploits, kernel exploits

Programming languages learnt: Python, Java, C, C++, BASH, Rust, JavaScript/TypeScript
Environments used: Linux, remote servers, mobile applications (Android Studio)
Databases used: SQL/Relational databases (PostgreSQL), Apache Lucene (text search)

Transferrable skills: problem solving, liaising with various stakeholders, research and navigating difficult open problems including planning and design of research activities, communication and teamwork

Experience

Graduate Vulnerability Researcher
InfoSect CBR
Nov 2026 - present

Casual Sessional Academic (Tutor)
Australian National University
2023-2025
- Contributed to the design of software development assignments in C, including testing harnesses, specifications and example implementations. Examples of projects include a memory allocator and a distributed database.
- Gained teamwork and collaboration skills, liaising between the tutor team and students

Education and qualifications

Bachelor of Advanced Computing R&D and Bachelor of Science (maths major) double degree
Australian National University
2021-2025
- University Medal 2025 winner
- Erin Brent Prize 2025 winner (for highest Honours mark in cohort)
- Perfect GPA of 7.0
- Gained experience with software engineering through courses (COMP2100 Software Construction, COMP2120 Software Engineering), which included building projects in Java
- Specialised in systems and architecture, which included building low level software in Java/C and scripting frameworks in Python and BASH. Key courses included COMP3770 Compiler Construction, COMP2310 Systems Networks and Concurrency, COMP4300 Parallel Systems and COMP3770 Microarchitecture.
